[redacted]

The attachment, [redacted] shows the 1953 production plan of liquid fuel and allied products for VEB, private and trusteeship plants and supersedes a previous plan which was rejected by the Council of Ministers.1/ The plan is drawn in two parts. One part shows the plant involved, the type of product, the amount of the product produced by each plant and the total amount of each type of product produced. The second part shows the planned distribution of these products in major categories of East German requirements: export, [redacted] requirements for the Soviet Army in East Germany and Russian reparation requirements. The planned distribution amounts can supposedly be changed among the various categories with the exception of those for the Soviet Army and for reparations. This plan is valid from 15 January 1953. All amounts are in metric tons.
